

Circadence's inCyt is a browser-based, strategy game that invites players to compete in epic cyber-themed battles. With no cyber security prerequisite knowledge required, players learn to gather intel and use gamified hack processes - like phishing and malware - to take out their opponent. Real-world cyber concepts are simplified into engaging, playful games increasing the Cyber IQ of all players.

Disrupt the standard, stale learning approach with games that reflect an organization's progressive culture and improve cyber hygiene across the workforce.

Inclusive Approach Enhance the Cyber IQ of both the beginning learner and seasoned IT security professional with gamified cyber security exercises.

Address Real-World Threats Gain exposure to the latest threats while learning cyber hygiene best practices and honing defensive strategies.

Track Player Performance Access performance metrics to understand organization security awareness posture.

Security awareness learning made easy, engaging, and effective

Professional Development

Introduce non-technical employees to cyber security with real-world cyber safety concepts simplified into a multiplayer battle game.

Reduced Business Risk

With intuitive game play, employees compete against bots or their colleagues to increase their security awareness and decrease their organizational risk.

Increased Learning Retention

Active-learning models in the game improve information [retention to 75% compared to 5%](#) in traditional classroom environments.

Personal Development

Each exercise provides useful information that professionals can apply at work and at home for added security benefit.

For Enterprise, Government and Academic Organizations

Designed for companies that understand that the biggest cyberattack risk comes from vulnerabilities within the employee base.

With inCyt, build a culture where security is everyone's responsibility.

It's so engaging, you don't even realize you're improving your cyber awareness!
